

Claims

1 1. An event management system for a plurality of users, the system
2 comprising:
3 a repository having information associated with event management;
4 a digital interface permitting access to the repository; and
5 a restriction component restricting access to portions of information in the
6 repository.

1 2. The system of claim 1, wherein the repository further comprises a
2 database having predesignated levels of access.

1 3. The system of claim 2, wherein the restriction component further
2 comprises:
3 a plurality of unique identification codes;
4 a record having all unique identification codes and a level of access
5 corresponding to each unique identification code; and
6 a software interface for receiving one unique identification code; searching
7 the record for the unique identification code; ascertaining the level of access
8 corresponding to the unique identification code; and restricting access to the
9 information in the database according to the ascertained level of access.

1 4. The system of claim 3, further comprising an access card having
2 one unique identification number.

1 5. The system of claim 1, wherein the digital interface further
2 comprises permitting modification of the information.

1 6. The system of claim 1, wherein the digital interface further
2 comprises effecting corresponding changes to the information where such changes
3 are necessitated by modification of the information.

1 7. The system of claim 1, further comprising a device for capturing
2 data related to an event display; and
3 a presentation component for displaying the captured data.

1 8. The system of claim 7, wherein the first device further comprises a
2 video camera.

1 9. The system of claim 7, wherein the presentation component further
2 includes a software interface to facilitate visual presentation of the captured data.

1 10. The system of claim 7, wherein the device further comprises a
2 functionality component for capturing data at a production site.

1 11. The system of claim 7, wherein the device further comprises a
2 functionality component for capturing data at an event site.

1 12. An event management system accessible via a communication
2 network, the system comprising:
3 a server accessible via the communications network;
4 a database having predefined levels of information, the database associated
5 with the server;
6 a digital interface to facilitate access the database by a plurality of users;
7 a plurality of unique identification codes, each unique identification code
8 corresponding to a predefined level of information;
9 a restriction interface for verifying unique identification codes and
10 ascertaining proper levels of access to the information;
11 a video camera for capturing detail pertinent to a production site and an
12 event site; and
13 a presentation interface for presenting the captured detail.

1 13. The system of claim 12, wherein the server further comprises a
2 website server.

1 14. The system of claim 12, further comprising a plurality of access
2 cards, each access card having a unique identification code.

1 15. The system of claim 12, wherein the presentation of the detail
2 further comprises multimedia presentation of the data.

1 16. The system of claim 12, further comprising a plurality of reports
2 related to an event.

1 17. The system of claim 16, wherein the plurality of reports embody
2 webpage formats.

1 18. The system of claim 12, further comprising an arrangement
2 component for facilitating travel accommodations.

1 19. The system of claim 18, wherein the arrangement component
2 embodies a webpage format.

1 20. The system of claim 12, further comprises a modification
2 component for facilitating interrelated changes to the information in the database.
